

## Thermolicer

1. Fish enter the Thermolicer after being pumped up from their pen
2. Water separation
3. Sea water is filtered and released
4. The fish is exposed to lukewarm water
5. Treatment loop
6. Water surface
7. Water separator for treatment water
8. Fish exits the system back into the pen
9. Heated water is circulated to the water tank for filtration, aeration and reheating
10. Treatment water is pumped
