

WEATHER FORECAST GAME: WEEK 1 RESULTS

How did you do in the Forecasting Game in Week 1?

You can see the results of this week's forecasting game [here](#).

The correct answers were:

Minimum temperature: 13.9°C

Maximum temperature: 22.9°C

Rainfall: 0.4mm

Relative Humidity at midday (British Summer Time): 50%

Firstly, a massive apology – the results published last week were wrong and most people did significantly better. The updated results have been put on the week 1 forecasting article and you can also see them [here](#). There were in fact some very high scores - the maximum possible score is 16. Again apologies, we should have noticed that an error had crept into the spreadsheet.

This week, Sunday's weather was complicated by a weak depression coming through in the morning, leaving polar maritime air in its wake.

On the whole, the observed values were very similar to last week – so I thought I'd look at the [Met Office website](#) to compare these values with the 'climate' of Reading in June – the values of maximum and minimum temperature are 20.0°C and 10.6°C.

In week 3 you have one more opportunity to test your understanding by forecasting the weather for the 9th July.

Please note that, if you gave your email address as your user name, we have edited it, but hopefully you can still find yourself.
